

## RJN Performs I/I Study in Arlington

The City of Arlington and RJN have a long history of working together to alleviate I/I in the City's system. In October of 1988, RJN conducted flow monitoring in the Rush Creek Drainage Area.

Subsequently, RJN performed 14 projects, including I/I studies and sewer rehabilitation design. These projects resulted in a substantial reduction of I/I and eliminated backups and overflows.

Currently, RJN is performing an I/I Study on the Rush Creek Interceptor — Basins 6 – 14, 48, and 49. RJN is also providing the City of Arlington with a comprehensive sewer evaluation and master plan.

The project will focus on identifying I/I, as well as restrictions in the mains using the following services:

- Flow monitoring
- GPS surveying
- Modeling
- Manhole inspection
- Smoke testing
- Dyed water flooding
- TV inspection
