Data Management Made Simple

YOUR DATA. YOUR WAY.
ANYTIME. ANYWHERE.

TRANSFORM DATA
INTO KNOWLEDGE

View your asset data spatially, and quickly filter to focus on your known performance issues or areas with recurring issues. Find what you need, when you need it. Data can also be easily exported to other applications.

FOCUS CAPITAL
WITH CONFIDENCE

Use advanced analytics to clearly visualize capacity, inflow/infiltration, and structural defect hot spots. Expedite maintenance or capital improvements where they are needed.
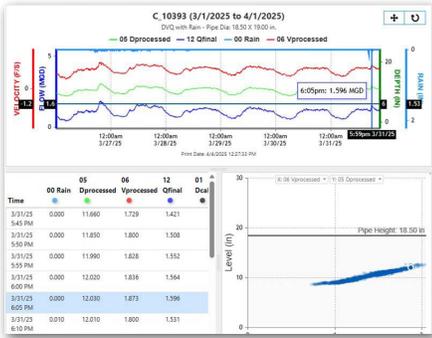

STREAMLINE
UTILITY MANAGEMENT

You no longer need to wait for results or wade through printed reports to take action. GIS map views and intuitive dashboards bring results to you with all of the critical details.

Designed by Engineers to Streamline Utility Data Management and Operations

Clarity® integrates data analytics, AI automation, and GIS management into one platform that monitors system conditions and performance. Clarity easily communicates with any data technology.
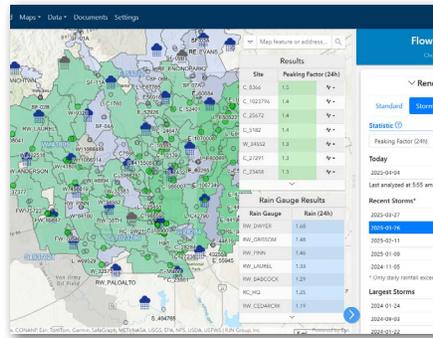

All of your system asset and performance histories are managed in a single platform, making it easy to find areas of concern, analyze root causes, develop sound maintenance programs and capital budgets, or simply comply with regulatory requirements.
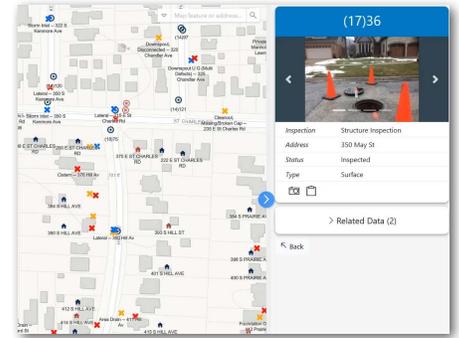

Elevate Analysis and Take Action 24/7

Flow Monitoring Manager

- Monitor flow performance in real-time
- Track rainfall levels and design storm occurrences as they happen
- Generate on-demand scattergraphs by meter, area, or system
- Animate storm response patterns over time
- Integrate public dashboards with web applications for regulatory compliance

RDII Manager

- Track flow performance and rainfall variations with interactive visualizations
- View system wet-weather responses through intuitive hydrographs
- Analyze peak flows and system responses
- See I/I trends by site, area, or entire system
- Compare responses using maps, network diagrams, and interactive graphs

Condition Data Manager

- Locate issues by type and severity
- Prioritize maintenance via hot spot and trends analysis
- Manage assets using condition metrics
- Access site photos and inspection records
- Create smart queries for rapid maintenance response
- Export detailed data using APIs, .xlxs, or .pdf

CCTV Manager

- Visualize inspection results with condition grading on maps and efficiently review problem videos
- Easily add existing footage
- Develop proactive maintenance strategies while managing your CCTV program from a central hub

Powerful Analytics

- Hydraulic curves, system balancing, defect analytics, trending, and automation tools allow you to quickly analyze your system data and take next steps.

See For Yourself

- Test drive Clarity to see our powerful data management tool in action.
- With quarterly feature releases and regular updates, Clarity is always ready to bring the latest in data management to your infrastructure.
